(.....)

*Important: Any score given in this sheet must be based on the matrix filled. The matrix is available on the separate sheets and is an integral part of this sheet.*

Thesis Rubrics					
No.	Component and relevant ELO	Criteria	Score of each component		
			Weight	Score (0 to 4)	Value (Score x Weight)
1	Objective and contribution of research	<p>The student clearly determines the main objective and contributions of his/her research.                      Research contribution must at least have one of the issue:</p> <ul style="list-style-type: none"> <li>• Solving the current problem found in practice</li> <li>• Improving the quality of accounting practice</li> <li>• Finding empirical evidence</li> <li>• Testing a theory</li> </ul> <p><i>If the contribution is one of the issue above, the maximum value is 6; if more than one, the maximum value is 8.</i></p>	Weight: 2		
2	The background of the study and literature review are relevant with the research topic	<p>The student formulates research questions based on the relevant research background. This is indicated by the relevance of the literature reviewed with the topic.                      Literature review section must contain relevant theory(ies) and previous research findings that may support research questions and hypothesis formulated, if necessary.                      The hypothesis (if any) must be formulated from a rigor theoretical and empirical facts.                      (Maximum value is 8)</p>	Weight: 2		
3	Research Method	<p>The student has followed methods relevant to answer research questions.                      The research methods must also in line with the hypothesis formulated.                      The methods must clear enough anyone can replicate the research.                      (Maximum value is 16)</p>	Weight: 4		
4	Results and discussion	<p>The students can describe any finding beyond numbers or other empirical facts. The discussion must start from evidence gathered. If the research has any statistical testing, the discussion must include not only the statistical test, but also the interpretation of the findings. It is important that the student to indicate whether his/her findings support or deviate from the theory or previous studies.                      (Maximum value is 24)</p>	Weight: 6		
5	Conclusion and suggestion	<p>The student can draw correct conclusion. The conclusion must at least state whether the research have answered all the research questions and whether the hypotheses have been supported.                      The student also has to direct readers to further research. In doing so, the student must indicate the limitations in his/her research for others to improve.                      (Maximum value is 8)</p>	Weight: 2		
6	Understanding on the research project	<p>The student has initiative, motivation, is able to work independently, possess academic ethics, and interact responsively to questions and suggestions from the audiences.                      (Maximum value is 20).</p>	Weight: 5		
7	Presentation	<p>The student is capable to deliver the presentation effectively, confidently, systematically, and clearly.                      (Maximum value is 4).</p>	Weight: 1		
8	Writing	<p>The student has written the manuscript using proper grammar and punctuations. In writing the thesis, the student must also follow guidelines in thesis writing.                      (Maximum value is 12)</p>	Weight: 3
